**Topic:** Technology Advances - How close are we?

**Abstract:** This presentation takes a look at recent technology advances in the biometrics industry and examines exactly how far we have come and how far we still need to go to see wide-spread adoption of biometrics.

**Biography:** In his role as CTO for Biocom International, Mr. Kyle is responsible for leading a talented team of software and hardware engineers in the development of BioMAP, Biocom's leading Multi-Vendor and Multi-Biometrics Interoperability Platform.

Mr. Kyle regularly works in conjunction with many of the world's largest systems integrators and is responsible for designing and delivering fully integrated biometrics systems to governmental and commercial clients. Mr. Kyle also works with many of the world's leading biometrics companies, to ensure that their products which have been integrated into the BioMAP Operating Platform are completely interoperable, and that the technology is always kept updated.

Mr. Kyle has over 10 years experience in traditional Security technology and Biometrics, as well as in Satellite, RF Communications, Data communications and Video Imaging systems. Mr. Kyle is an accomplished public speaker and regularly presents at technology and biometrics expositions and conferences.

Mr. Kyle is the Vice-Chairman of the INCITS M1 committee on biometrics standards as well as the Vice-Chairman of the M1.2 task group within M1 that is responsible for standards related to biometric technical interfaces.

Mr. Kyle is the inventor of a number of Patents in the biometrics field and is a co-founder of Biocom International..
