**Topic:** The Application of Biometrics in Volume Commercial and Consumer Markets

**Abstract:** While a great deal of focus has been given to the application of biometrics in government end applications, the volume oriented commercial and consumer markets have seen a surge in demand over the last year. The combination of security concerns (on a corporate and personal level) and the continued reduction in pricing, especially in fingerprint sensors, has resulted in a number of recent announcements in the PC and mobile (cell phone) markets. Today, consumers in Korea and Japan can buy fingerprint enabled phones, while several companies such as HP, Fujitsu, Toshiba, IBM/Lenovo and Samsung have now introduced fingerprint enabled laptops. The presentation will highlight some of these applications and the key factors driving the rapid acceleration in the consumer and commercial application of fingerprint biometrics.

**Biography:** F. Scott Moody is the company's co-founder, President and CEO. Since founding the company, Mr. Moody has been responsible for its overall strategic direction, fund raising, business development and the management of day-to-day operations. The company has been able to assemble a highly qualified team, introduce new products at a rapid pace, quickly ramp to production and develop strong relationships with industry partners. Prior to founding AuthenTec, Mr. Moody was the Vice President of a \$200M division of Harris' Semiconductor Sector (now Intersil). During his tenure at Harris, Mr. Moody led the very successful turnaround of several diverse operations including the repositioning of the commodity logic business which was eventually sold to TI, the acquisition and repositioning of GE Microelectronics and the highly profitable turn around of the Group's Mil/Aero business. Mr. Moody began his career at Harris in 1980 where he gained experience in both the Semiconductor and Electronic Systems Sectors, including functional experience in engineering, manufacturing, program management, marketing and general management. Mr. Moody received a BS in Industrial Engineering from North Carolina State in 1980 and an executive MBA from the University of Florida in 1987.
